

The Videofied Outdoor MotionViewer has a 1/4" x 20 thread on the back for mounting with the MB601 Panavise mount. In some situations you may need to mount the Outdoor MotionViewer to a pole. As there is not a specific mounting bracket included with the MB601 this document will explain some of the common ways the Outdoor MotionViewer has been mounted to a pole.

1. This concept uses an add-on PAN864, magnetic base, to the MB601. Using a metal electrical plate and some U brackets the PAN864 will hold the Outdoor MotionViewer to the pole.

2. This concept uses the false ceiling accessory in the MB601 and zip ties to secure the Outdoor MotionViewer to the pole.
