

Installing ActiveX Controls for Camera 83 IP Connection

To change the IP address of any camera you must ensure you are logged onto Internet explorer. This may require you to install 'ActiveX controls', this document will explain how this can be achieved.

Once you have changed the IP address on the computer so that it is in the same range of the camera, open 'Internet Explorer' and type the default IP address of the unit:

Default IP addresses:

- Camera 83 IP 1.3: 192.168.1.66
- Camera 83 IP 2.0: 192.168.1.66

Once the screen has loaded the following message will be shown which must be completed, "Please click here to download and install the plug-in. Close the browser when installing the plug-in." On downloading the plug-in, the following message will be displayed, select 'Run'.

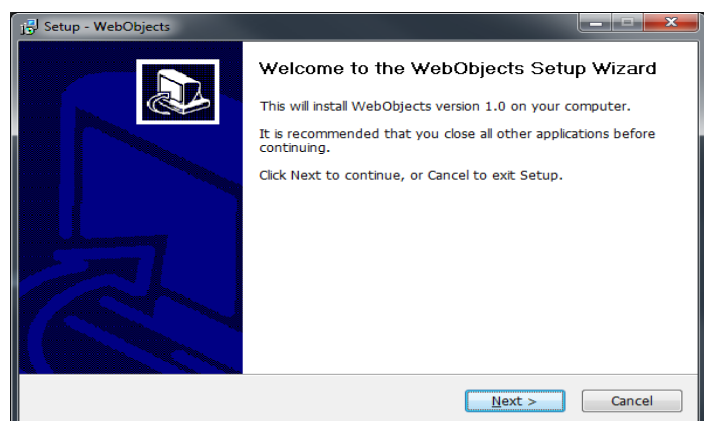

Another pop-up menu will be displayed, select 'Run'.

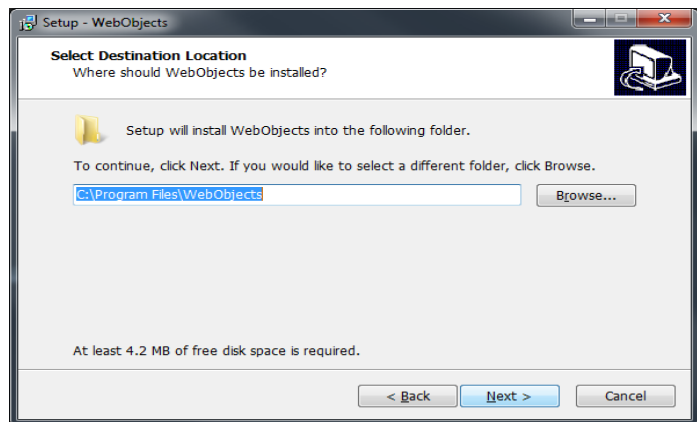

Setup Wizard

Close your browser and follow the steps in the 'Setup Wizard guide', select 'Next' after reading the setup.

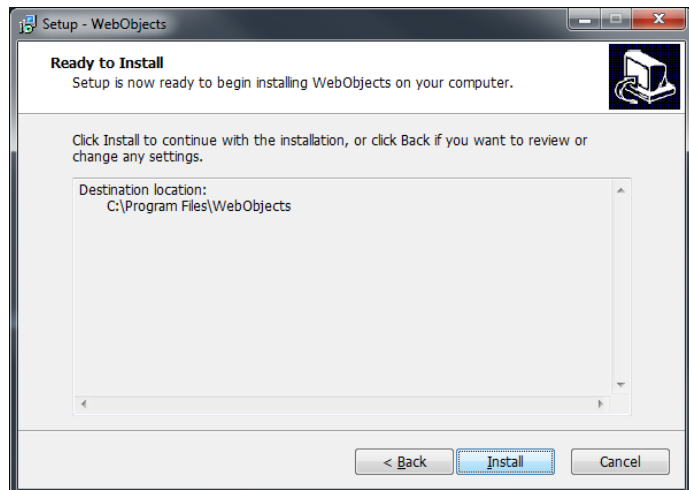

Select Destination Location

Location of installation must now be chosen. This can be changed by selecting the browse button. Once the path is set for the install of the program, select 'Next'.

Ready to install

Now you are ready to install 'Active X' on your system. Click 'Install' to start the process.

Completion of the Setup wizard

Once the setup is complete select 'Finish'. On completion of installation open 'Internet explorer' and put the IP address of the unit back into the address bar and log back onto the IP Camera,

Username: admin **Password:** admin.
