

Installing ActiveX Controls for Camera 198 IP Connection

To change the IP address of any camera you must ensure you are logged onto Internet explorer. This may require you to install 'ActiveX controls', this document will explain how this can be achieved.

Once you have changed the IP address on the computer so that it is in the same range of the camera, open 'Internet Explorer' and type the default IP address of the unit:

Default IP addresses:

- Camera 83 IP 1.3: 192.168.1.88
- Camera 83 IP 2.0: 192.168.1.88

On loading the page a pop-up will appear. Select the 'Install' button on the "Internet Explorer blocked this website from installing an ActiveX control".

On selecting the installation of Active X a window will pop up and prompt for an install. Select the 'Install' button to commence installation.

Once this has installed log onto the camera using **Username:** admin

Password: 123456
